Notes:

Permaculture Garden Plants:

- Trees and shrubs are used to provide shade, wind protection, and natural beauty. They also attract birds and other wildlife.
- Plants are selected based on their ability to thrive in the local climate and soil conditions.
- Compost bins are used to recycle organic waste into a nutrient-rich soil amendment.
- Raised beds are used to help with drainage and pest control.
- Irrigation systems are installed to ensure optimal water distribution.
- Mulch is applied to help retain moisture and suppress weeds.
- Pest management practices are employed to control insects and disease.
- Integrated pest management (IPM) is used to minimize the use of chemical pesticides.
- Cover crops are used to improve soil health and suppress weeds.
- Companion planting is used to promote plant growth and repel pests.
- Crop rotation is practiced to reduce soil-borne diseases and pests.
- Organic fertilizers are used to provide essential nutrients to the plants.

Tennis court fencing around the perimeter.

Patio and Playground Layout:

- A stacked bond pattern using clay-colored bricks will be used for the walls of the tennis court.
- A tarp cover will be needed.
- A kennel enclosure with a fence roof will be needed for the goats.
- Extra Large Cot (55 in wide X 38 in Deep) will be placed inside a second hoop house to provide additional space for the goats.
- Sidewall Height: 6.5 ft
- Canopy Dimensions: 10 x 20 ft
